

KIT 1037 – Twin Bulb Connection

Kit No 1037 is a strobe light device. You can connect two lamps in parallel to the PCB to give greater light output.

If you use low power lamps they will flash together. If you use higher power lamps only one will flash because the transformer power is not sufficient to activate two lamps simultaneously.

Here is a diagram to help you in connection. Note that the lamps must be low power. Ensure they are fixed near to the PCB. Do NOT use long connection wires.

KIT No 1037 Second lamp connection

Note that the lamps
must be the same type
