

Guitar Amplifier Type MUS033

Instruction Manual

For safety reasons, only plug the amplifier into an earthed wall or extension socket.

Your Quasar guitar amplifier is featuring controls for tone and overdrive.

Switching on

Connect your electrical guitar to the INPUT terminal on the top left side of the amplifier via a 6.35mm jack plug. Push the 'POWER' button. The indicator lights up.

Volume Control and Special Effects

The button GAIN on the left side control the Distortion sound effect. Turn button to the right. Try out several settings until you get the desired sound effect. The volume is set via the VOLUME control.

Tone Control

The Treble, Middle and Bass controls set the desired tone. 'TREBLE' controls the high frequencies, 'MIDDLE' the mid range frequencies and 'BASS' the low frequencies.

Connections

On the front side of the amplifier a headphones plug allows you to connect any low level stereo headphones with a 6.35mm jack plug. If headphones are connected, the built-in speaker is automatically disabled.
